Declare **YOUR** Major in **Structural Engineering Technology**

Structural engineering technology offers a world of challenging and fascinating career opportunities. Graduates with an Associate in Science degree could work as an assistant to an engineer or as a drafter or designer.

**Graduates of the structural engineering technology program are involved in:**

- Bridges, culverts and retaining walls
- Building frames and foundations
- Specialized mechanical frames
- Large transportation projects such as tunnels, airport terminals and many railroad structures
- Dams and docks

You may also continue your education with a four-year bachelor’s degree in engineering technology to pursue a career as an engineer.
